 Twill label & joker label

**NOTE ON THE PRINTING OF NEONS:**

The neon optical and pigment dyes in these shirts are reactive to heat. The recommended maximum fabric temperature is 320 degrees. Printers are advised to use temperature strips to measure the temperature of the fabric as it passes through the dryer or heat source.

Dryer temperature should be adjusted to keep the fabric below 320 degrees. When placing garments on the belt, lay them as flat as possible to avoid high spots that may touch the inside of the dryer or come closer to heat elements.

It is recommended to test (and launder) a shirt before a full production run. This information is provided only as a guide; individual results may vary.
